Model Selection Method

1. Select the bore size according to the thrust and practicality. Refer to the table on page 60.
2. Determine the selection conditions in order, starting from the upper row in the table below, and choose one of the selection graphs to be used.

2.2) Selection Examples

Example ①: Mounting: Vertical
Maximum speed: 500mm/s
Overhang: 40mm
Load weight: 0.1Kg

Refer to Graph based on vertical mounting and a speed of 500mm/s.

In Graph , find the intersection of a 40mm overhang and load weight of 0.1Kg, which results in a selection of $\Phi 20$.

Example ②: Mounting: Horizontal
Maximum speed: 500mm/s
Load eccentricity: 50mm
Overhang: 30mm
Load weight: 0.1Kg

Refer to Graph based on horizontal mounting, a speed of 500mm/s and load eccentricity of 50mm.

In Graph , find the intersection of a 30mm overhang and load weight of 0.1Kg, which results in a selection of $\Phi 16$.

Installation and application

1. The actual loading and moment of cylinder must be less than it's allowable loading and moment:

1.1) The allowable moment of cylinder

Allowable torque (Nm)	HLH6	HLH10	HLH16	HLH20
Pitch moment M_p	0.25	0.95	3.28	6.29
Yaw moment M_y	0.25	0.95	3.28	6.29
Roll moment M_r	0.41	1.49	3.45	6.61

1.2) When the cylinder is subjected to different type of moment, there will be different degree of shift in performance, please refer to the following table for details.

Table deflection due to pitch moment

Table deflection (arrow) when a load acts upon the section marked with the arrow at the full stroke of the compact slide.

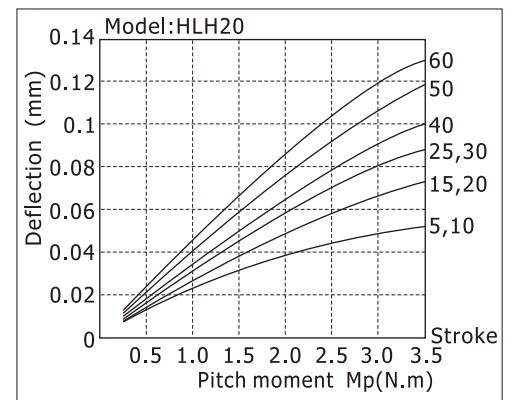

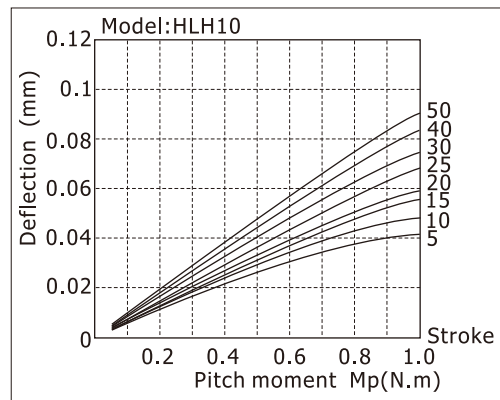

Table deflection due to yaw moment

Table deflection (arrow) when a load acts upon the section marked with the arrow at the full stroke of the compact slide.

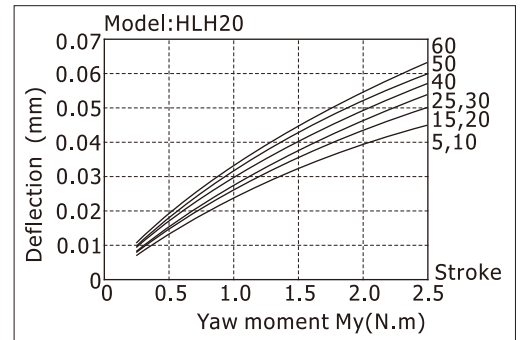

Table deflection due to roll moment

Table deflection (at A) when a load acts upon section F at the full stroke of the compact slide.

2. The compact slide can be piped from 3 directions.
Confirm the pressure ports and operating direction. (See drawing right)

3. In compact slides with sensor switch, there is a danger of sensor switch malfunction if the mounting pitch is less than the dimensions shown in Table below. Be sure to allow at least the indicated interval.

At least indicated interval (mm)/Model	HLH6	HLH10	HLH16	HLH20
d	5	5	10	15
L	21	25	35	47

4. When the output of the compact slide will be directly applied to the table, it should be applied along the rod axis.
(See drawing below.)

5. Be sure to use a flow control valve, and adjust the speed to 500mm/s or less.

6. A compact slide can be mounted from 4 directions.

Don't exceed the max. fastening torque then frightening the mounting bolts.

7.2) Since the table is supported by the linear guide, take care not to apply strong impact or large moment to the guide section.

7.3) Hold the slide when fastening work pieces with bolts, If the body is held while tightening bolts, excessive moment may damage guide section.
