The NB Series

Compact Interchangeable Air Cylinders that are loaded with Features and Benefits

Value-Added Features – Stainless steel tie bolts and aluminum spacers lock precision machined heads tightly around a unique, high strength, composite cylinder tube. The tube is extremely smooth, the self-lubricating interior surface insures highly reliable performance and extended seal life. Its high impact resistance reduces chances of cylinder failure due to dings or dents. Zero slip-stick avoids problems that metal cylinders encounter when they sit in a static condition for extended periods of time. Combined with hard chrome plated stainless steel piston rods and a unique, non-metallic rod bearing.

Exceptional Piston Rod Bearing – The better the bearing, the more cycle life you can expect from your air cylinders. **The NB Series** cylinders incorporate a truly superior rod bearing material - Duralon®. Duralon® is a composite with a PTFE/Dacron® fabric liner bonded to a supporting filament-wound, high strength, fiberglass and epoxy resin shell. Resistant to corrosion, moisture and temperature to 325°F, the bearing is reliable in any environment. It has an extremely high load bearing capacity, very low friction, and will not gall or score the piston rod.

Features

- Double acting, single rod
- Double acting, double rod
- Double acting, hole through double rod
- Single acting, spring retracted rod
- Reverse acting, spring extended rod
- 8 Bore sizes 1/2" through 4"
- Strokes to 4" (standard)

† Heavy duty rear head is recommended for applications where the cylinder is mounted on the front face or trunnion-mounted, and impact loading (20 or more cycles/minute) occurs between the piston and rear head. It increases the overall length of the cylinder as shown. † A minimum stroke of 3/8" is required to sense end-of-stroke positions. For low friction seals used in conjunction with magnetic position sensing, use "EM" length adder only.

Threaded Mounting Holes

1/2" Bore

Available either or both ends. (CC shown)

3/4" Bore & Up

Nose Mount

Available on: Double Acting, Single Rod; Single Acting, Spring Return; Single Acting, Spring Extend. Includes rod wiper and heavy duty rear head. See length adder above.

4 (8)	150

Non-rotating, double acting
4 Bore sizes 3/4" through 2"
Strokes to 4" standard

Twin piston rods are incorporated into the cylinder head to achieve NON-ROTATION. The rods are securely fastened to the piston and tied together externally by a rod end tool bar. The tool bar insures that the rods move in tandem and provides an ideal mounting surface for any attachments required by your application. The tool bar is furnished with threaded mounting holes or optional counter-bored mounting holes.

Ratings-Standard Units All Series

Temperature Rating	
Electronic Sensors.....	-4° to + 176° F (-20° to + 80°C)

Allowable Torsion Load and Rotational Tolerance

Side loading should be avoided for any cylinder application. The smaller diameter twin rods will have more deflection due to side load than the one standard rod in a comparable NB Series cylinder. However, those cylinders are designed to work satisfactorily against pure torsional loads. Maximum torsional load per bore size is shown in the following table.

Approximate Angular Deflection (Degrees) due to max torsional load

Bore	Torsional Load Max.	Stroke					
		0 to 1-1/2	2	2-1/2	3	3-1/2	4
3/4 (2)	0.3	less than 0.22	0.51	0.98	1.67	2.62	3.88

Mounting Options

Trunnion Mount

Available rear, front or both.
(CT shown solid)

Pivot Mount

Complete with bronze pivot bushing.
Not available as an accessory. (CR shown)

Threaded Mounting Holes

Available either or both ends.
(CC shown)

Screw Clearance Holes

Available either or both ends.
(CF shown)

Approximate Cylinder Weights (ounces)

Bore	Base	Adder per 1/8 of Stroke

Temperature Rating	
Electronic Sensors.....	-4° to + 176° F (-20° to + 80°C)

Extend Port - Air supplied to all pistons

Retract Port - Air supplied to front piston only

How it Works

We attach multiple pistons to a common shaft and provide internal air passages through the shaft to all pistons.

When air pressure is applied to the extend port, all pistons are pressurized simultaneously, enabling tremendous thrust forces to be obtained. (See the cylinder sizing guide below for the force multiplying factors.)

When air pressure is applied to the retract port only one piston is pressurized.

Cylinder Sizing Guide

Bore	Bore Model Designation	Extend Power Factor			Retract Power Factor
		M2	M3	M4	
2-1/2 (6)	6	9.4	13.8	18.3	4.5
3 (7)	7	13.5	20.0	26.5	6.5
4 (8)	8	24.3	36.1	47.9	11.8

How to Order
