Technical information

The min. control pressure must be adhered to, since otherwise faulty switching and valve failure may result!
 The pressure dew point must be at least 27 °F under ambient and medium temperature and may not exceed 5.4 °F .
 The oil content of compressed air must remain constant during the life cycle.
 Use only the approved oils from AVENTICS. Further information can be found in the “Technical information” document (available in the MediaCentre).
 UL certification

When using polyurethane tubing, we recommend using additional stiffener sleeves.
 For push-in fittings, only use plug accessories made of plastic (polyamide) from our catalog.
 The combination of double and triple base plates allows a configuration in increments of 1.
 See the following pages on the series for technical data on individual components.
 See the Media Centre for information on pin assignment (version A and version B) of the D-Sub connector.
 AV03-BP: Only 2x base plates
 For assembly in a control cabinet with direct sealing or when using transition plates, a supply plate must be configured after 8 valves
 ATEX:
 AV valve systems are certified components in accordance with directive 2014/34/EU
 The maximum input power must not exceed 20 W.
 The valve system must be installed in an ATEX-certified control cabinet with at least IP 54.
 The maximum expansion stage is set in the configurator.
 Min./max. ambient temperature -10 ... 45 °C
 Min./max. medium temperature -10 ... 45 °C
 ATEX-certified valve systems with identification II 3G Ex nA IIC Gc can be generated in the Internet configurator.
