

### Features

- Molded one-piece solenoid with highly efficient solenoid cartridge and 0.55 W low wattage coil
- Standard ambient temperature of 149°F (65°C)
- Optional 176°F (80°C) high ambient temperature version
- Designed for use in automation of plant control systems to provide:
  - PLC and DCS® compatibility for BUS network and traditional wiring
  - Reduced temperature rise
  - Increase battery life
  - Reduce wiring cost
  - Energy savings
- Wide selection includes 2/2, 3/2 normally closed (including Quick Exhaust), 3/2 universal, 4/2, 5/2, & 5/3

### Ordering

Normal Ambient Version: EV8551H322 24VDC  
High Ambient Version: EF HT 8316H301 24VDC  
Surge Suppression Version: EV MF 8314H301 24VDC

### Solenoid Enclosures

Standard: Watertight, Types 1, 2, 3, 3S, 4, and 4X.

Optional: Explosionproof and Watertight, Types 3, 3S, 4, 4X, 6, 6P, 7, and 9.

(To order, add prefix "EF" to catalog number. For explosionproof with 316 Stainless Steel hub and trim, specify prefix "EV".) Surge suppression coils also available "MF" prefix.

See Optional Features Section for other available options.

### Approvals

UL & CSA Approved for Class I Div. 1 Locations & Class I Div. 2 Non-Incendive Solenoid for Hazardous Locations. UL Listed General Purpose Valves. Meets applicable CE directives.

SIL 3 capable per IEC 61508 on 8314, 8316, 8551, and 8553 const. Third party certification provided by EXIDA. Refer to Engineering Section for details.

ATEX/IECEx certified with prefix "EV" as listed. Refer to Optional Features Electrical Section for details.

## Nominal Ambient Temp. Ranges

## Important

These solenoid valves are intended for use on clean dry air or inert gas, filtered to 40 micrometres or better. The dew point of the media should be at least 10°C (18° F) below the minimum temperature to which any portion of the clean air/inert gas system could be exposed to prevent freezing. If lubricated air is used, the lubricants must be compatible with Nitrile elastomers. Diester oils may cause operational problems. Instrument air in compliance with ANSI/ISA Standard 7.0.01-1996 exceeds the above requirements and is, therefore, an acceptable media for these valves.

① There are two exhaust flows in the exhaust mode (pilot and main). The pilot exhaust must be connected to the main exhaust when the air or inert gas cannot be exhausted to atmosphere.

② For "Quick Exhaust" valves, pressure port is 1/16", exhaust port is 1/4".

③ **IMPORTANT:** A Minimum Operating Pressure Differential must be maintained between the pressure and exhaust ports. Supply and exhaust piping must be full area, unrestricted. ASCO flow controls and other similar components must be installed in the cylinder lines only.

⑤ Zero minimum when valve selection gasket is in external position and proper auxiliary air pressure is applied. Minimum 15 psi Operating Pressure Differential when selection gasket is in the internal position.

⑥ Can be used for **dry** natural gas service (no agency approvals) with the EF or EV prefix without manual operator.

⑦ Normally closed = 130 psi. Normally open = 105 psi.

⑧ Solenoid only approvals with EF or EV prefix, no approvals with general purpose coil (no prefix).

⑨ Safety manual and FMEDA (Failure Modes Effects and Diagnostic Analysis) report available.

⑩ SIL 3 Capable, Certified by Exida, only valid when used as Normally Closed.

† Dual solenoid 8344 requires minimum pressure of 20 psi. Single solenoid version has 10 psi minimum pressure requirement.

†† UL/CSA approved for use with dry natural gas or propane gas with EF or EV prefix without manual operator.

✓ ATEX/IECEx certified with prefix "EV".
